

DC SIDDHARTH

AIML STUDENT • FULL-STACK BUILDER • PROBLEM SOLVER

[GitHub](#) • [LinkedIn](#) • [LeetCode](#) • VNRVJIET, Hyderabad

SKILLS

PROGRAMMING

Python • C • C++ • JavaScript

FRONTEND

React • Vite • HTML • CSS • Tailwind

BACKEND / DATABASE

Node.js • Express • MongoDB • MERN
FastAPI • PostgreSQL

PROBLEM SOLVING

DSA • LeetCode

PROJECT EXPOSURE

TensorFlow / Keras • CNN
Streamlit • NLP • Graph Analytics

EDUCATION

VNRVJIET

B.Tech - Artificial Intelligence & Machine Learning
2nd Year • 1st Semester

FOCUS

- › AI Engineering
- › Data Engineering
- › Full-stack Development
- › Applied AI/ML

PROFILES

github.com/SiddharthDC786
leetcode.com/u/DCSiddharth

PROFILE

Second-year AIML student building hands-on experience across full-stack development, DSA and applied AI/ML. I enjoy turning ideas into working prototypes, learning new tools quickly, and exploring paths such as AI engineering and data engineering before choosing a specialization.

SELECTED PROJECTS

Vigil / investigation-ai | [TEAM PROJECT](#)

React • Vite • FastAPI • Python • PostgreSQL • Neo4j • NLP

- Contributed to an AI-powered criminal-network analysis system that turns case data into searchable entities, relationship graphs, timelines and investigation views.
- Worked across a stack involving React/Vite, FastAPI, PostgreSQL, Neo4j and NLP/entity-resolution concepts, with graph analytics for connected-data analysis.

CampusSpace AI | [COLLABORATIVE MERN PROJECT](#)

React • Vite • Node.js • Express • MongoDB • JWT • Zod

- Collaborated on a campus resource-booking platform for classrooms, labs, seminar halls and other shared college spaces, with separate student and admin workflows.
- Worked with a MERN architecture covering JWT authentication, role-based access, validation, booking conflicts, notifications and a React-based booking interface.

Malaria Detection System | [AI / HEALTHCARE PROJECT](#)

Python • TensorFlow/Keras • CNN • OpenCV • Streamlit

- Built the Streamlit frontend, integrated the CNN model, and worked on image preprocessing and prediction flow for parasitized-vs-uninfected blood-smear classification.
- Explored custom CNN and transfer-learning workflows, model evaluation and presenting prediction confidence through an interactive web interface.

ADDITIONAL BUILDS AI Portfolio Assistant - React/Vite + Node/Express + Gemini profile chatbot. • ParaDetect-AI - TensorFlow/Keras CNN prototype for malaria blood-smear classification.

CURRENT FOCUS

- Practicing DSA on LeetCode while strengthening C++ problem solving.
- Building stronger full-stack fundamentals and exploring AI engineering and data engineering through projects.
